

Mathematics in Kindergarten

MHPS

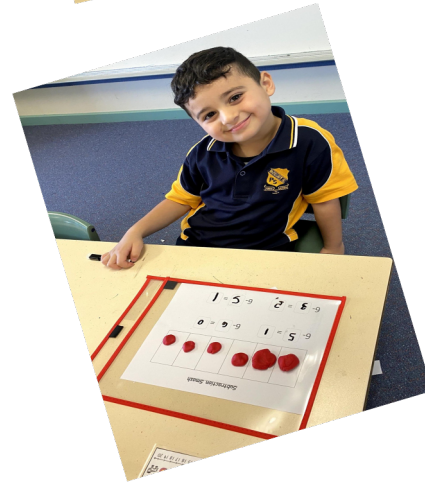

Kindergarten classes engage in mathematics lessons on a daily basis.

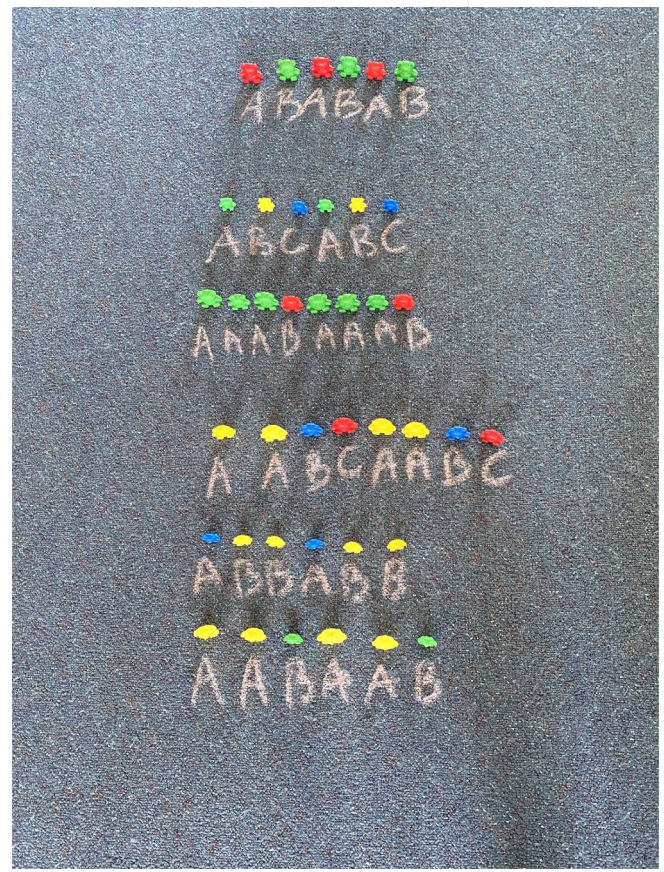

The strands covered in the first year of school include **whole number** and **algebra**, **measurement** and **geometry**, **statistics** and **probability**, and **working mathematically**.

Kindergarten students participate in hands on learning activities using concrete materials to consolidate their understanding and experiment through trial and error.

Lessons can be whole class, small group, pairs and individual based on the content or student learning needs.

At home tasks are set using Maths Seeds and Seesaw.

Students also complete maths activities using technology such as Ipads, laptops, and the IWB.
